SUMMARY

Full-stack developer in the making with hands-on experience in React.js, Node.js, and AI-integrated web applications. Skilled in building REST APIs, responsive UIs, and end-to-end MERN stack features using modern web technologies. Actively seeking an internship to contribute to real-world products and grow within a collaborative team.

EDUCATION

B.Tech in Computer Engineering (Software Engineering)

2023 – 2027

Uka Tarsadia University

INTERNSHIP EXPERIENCE

Web Development Intern

January 2026 – April 2026

Zaalima Development

Remote

- Built and consumed RESTful APIs using Node.js and Express.js as part of a 4-member team, within an agile, sprint-based workflow, collaborating via Git.
- Designed reusable React.js UI components and delivered end-to-end MERN stack features from database schema to frontend integration.

TECHNICAL SKILLS

Frontend	React.js, Tailwind CSS, JavaScript, TypeScript
Backend	Node.js, Express.js, MongoDB, SQL, REST APIs
AI & Data	LangChain, Generative AI, RAG, MongoDB Atlas Vector Search
Databases	MongoDB, MySQL, PostgreSQL
Tools	Git, GitHub, VS Code, Claude AI, Antigravity, Postman, Vercel, Render, Supabase
Languages	JavaScript (ES6+), Python, Java, C
Concepts	Full-Stack Development, Problem Solving, API Development, Version Control, Authentication

PROJECTS

[OpsMind AI](#)

React, Node.js, Express, MongoDB, LangChain, Google Gemini API

- Built a full-stack enterprise AI assistant for querying SOP documents (PDF/DOCX) via natural language, supporting multi-format document ingestion using a RAG pipeline with LangChain and Google Gemini embeddings.
- Implemented MongoDB Atlas Vector Search for semantic retrieval across 5 database collections, real-time SSE streaming responses, hallucination detection, and JWT-based authentication with role-based access control.
- Delivered a separate admin dashboard with analytics, audit logs, document management, and system health monitoring across 10+ pages.

[Tripzy – AI Travel Planner](#)

React, TypeScript, Express, PostgreSQL, Prisma, Google Gemini API

- Built a full-stack AI travel planner generating personalized day-by-day itineraries using a two-stage generation flow (3 lightweight trip concepts to full detailed itinerary), powered by Google Gemini with a Groq fallback for AI resilience.
- Designed a 7-model relational schema with Prisma and PostgreSQL, a context-aware AI chatbot, and a squad expense splitter with automated bill-splitting.

Other Projects

AI Caption Generator (*Next.js, TypeScript, Gemini/GPT-4o-mini*) — Zero-login AI tool that generates platform-optimized captions instantly from a prompt or photo. **MediCare** (*React, Node.js, MongoDB, Stripe, Clerk*) — Multi-role healthcare appointment platform with payments and role-based portals.
